# Smart VENT® BLOCK OR POURED INSTALLATION INSTRUCTIONS

EXTERIOR VIEW

SIDE SECTION VIEW

1. Prepare a CLEAN 16-1/4" wide by 8-1/4" high rough opening for each vent (1 block wide x 1 block high) with the bottom of the hole no more than 12" above finished grade.
2. Measure wall thickness and bend (more than 90°) 4 straps at nearest slot to the measurement from pointed end.
3. Remove door from frame. (turn upside down, rotate bottom of door outward and slide out of slots)
4. Insert two straps into two top sets of slots in frame from rear. After pushing teeth through rear set slots, ONLY PUSH STRAPS ONE CLICK INTO FRONT SLOTS. Straps should have bent legs pointing up.
5. Caulk may be applied behind front frame flange. Tilt frame so top goes into wall opening first with strap legs going behind wall above opening. Push frame into opening so front flange is tight to face of wall.
6. Reach through frame opening and install two bent straps through two bottom sets of slots in frame, trapping wall between front flange and bent strap. Squeeze all straps tight. Frame should be flush to wall face and secure.
7. Check that frame is square and slots are clear of debris, mortar and caulk.
8. Install door into frame by grasping bottom of door (with plastic pins) and front (with smaller squares) facing up. Slide door into frame such that metal pins on each side slide into slots on sides of frame. Let the door slide down following the path of the slots, until they are at the bottom of the slots in the dimples.
9. Let the bottom of the door go so that the door rotates down into the frame. Check that door is latched on both sides.
